1 Starting point

Population	0.98 m
GDP	EUR 37 bn
Public administration (NACE O)	36 k
Electricity price	242.9 EUR/MWh
Renewables	24.1%
Live hyperscaler regions	0

2 What is structurally different

- Grid isolation. The national grid is an electrical island or nearly so (weak or single interconnection). The April 2025 Iberian blackout and Cyprus/Malta interconnector outages show the failure mode. Every site needs on-site generation and storage sized for multi-day ride-through, and the PUE and facility CAPEX assumptions should be revisited upward once site studies exist.
- Moderate seismic risk. Seismic zoning should be a site-scoring criterion; at least two regions in different domains.
- Expensive power (243 EUR/MWh vs. EU average ~184). Power is the dominant OPEX line; free cooling, heat reuse, and siting near renewables or nuclear baseload move the economics more than server choice does. The model's power OPEX line is the number to attack first.
- Micro-state geography. The Dutch rule of 3-5 regions with 50-100 km separation cannot be met inside the national territory. The model therefore assumes two in-country sites carrying 55/45 of the load and no in-country reserve. A credible disaster-recovery posture requires an out-of-country partner site - deferred to the federation layer.

- No hyperscaler region in-country. Unlike the Netherlands, there is no commercial hyperscale tier to fall back on for non-critical workloads without leaving the jurisdiction. The sovereign core therefore has to be sized for a larger share of total government demand, and the hybrid model (Dutch GOAL.md section 7) needs a cross-border commercial tier.

3 Capacity

Servers	502 (CPU 338 / GPU 25 / storage 139)
IT critical load	0.8 MW
Facility design load	1.3 MW
Sites	2 (by capacity 1, floor 2)
Average per site	0.6 MW
Site count set by	the minimum-sites floor, not capacity
CAPEX	EUR 30 m
OPEX	EUR 4 m / yr

4 Proposed geography

Region	Role	Share	MW	Notes
Nicosia	Primary civil cloud	55%	0.7	Government DC and CyIX; inland, away from cable landings.
Limassol - Paphos	Sovereign secondary	45%	0.6	East-Med cable landings; 80 km separation is the island maximum.

First-pass geographic hypotheses encoding only the obvious constraints, to be replaced by scored site selection.

5 Legal and regulatory posture

Governing instrument	Digital Strategy for Cyprus; Deputy Ministry of Research, Innovation and Digital Policy
Cloud certification	No national scheme; ISO 27001
Data classification	National classified-information handling rules aligned to EU/NATO markings
Procurement route	Public Procurement Directorate, Treasury of the Republic

Foreign jurisdiction exposure. No in-country region; Microsoft and AWS consumed from other EU regions

Under the US CLOUD Act and FISA 702 a provider subject to US jurisdiction can face a lawful order for data it holds regardless of where that data sits. Residency is necessary but not sufficient; what matters is who holds the keys and who can be compelled.

6 Current state and provider landscape

Government cloud	Government G-Cloud / Government Data Centre - Deputy Ministry of Research, Innovation and Digital Policy (DMRID) + Cyta hosting; RRF hybrid-cloud consolidation
Maturity	pilot
Digital identity	CY Login + Cyprus Digital ID
Interconnection	CyIX Nicosia; major East-Med cable hub (2Africa Cadmos Tamares Medusa)

7 Migration path and cost

Phase	Scope	MW	CAPEX	Cumulative	Hybrid
1	Sovereign core	0.3	EUR 5 m	17%	no
2	Security and defense	0.5	EUR 12 m	58%	no
3	State record	0.2	EUR 6 m	77%	no
4	Elective	0.3	EUR 7 m	100%	no

Phase 1 is the number that matters: **EUR 5 m** for 0.3 MW, 17% of total CAPEX. That is the floor below which no hybrid arrangement helps — and it is a small fraction of the full build.

8 Geography and threat notes

Moderate seismic (Cyprus Arc); water scarcity and extreme heat; isolated island grid (oil-fired) with no interconnector until Great Sea Interconnector (>2029); divided island; Middle East conflict proximity; non-NATO

9 Critical national data in scope

What the platform would *hold*, tiered by consequence of loss rather than by department. Tier 0 is the identity spine; tier 1 is the enforceable relationship between citizen and state. **0 of 15 record classes recorded.**

Tier	Record class	Register	Official description
0	Civil registry core	<i>not yet recorded</i>	
0	Facial biometric	<i>not yet recorded</i>	
0	Fingerprint biometric	<i>not yet recorded</i>	
0	Breeder document scans	<i>not yet recorded</i>	
0	Document issuance history	<i>not yet recorded</i>	
0	Digital identity credentials	<i>not yet recorded</i>	
0	Authentication audit log	<i>not yet recorded</i>	
0	Electoral roll entry	<i>not yet recorded</i>	
1	Tax	<i>not yet recorded</i>	
1	Benefits & pensions	<i>not yet recorded</i>	
1	Land & property registry	<i>not yet recorded</i>	
1	Judicial & criminal justice	<i>not yet recorded</i>	
1	Education	<i>not yet recorded</i>	

Tier	Record class	Register	Official description
1	Business registry	<i>not yet recorded</i>	
1	Vehicle & licensing	<i>not yet recorded</i>	

A blank row means this repository has not yet researched that register. It is not a statement that the country holds no such data. Tiers 2 (health records, imaging) and 3 (genomics, archives, video retention, geospatial) are out of scope: they hold most of the bytes, but Tiers 0 and 1 hold the sovereignty.
