1 Starting point

Population	5.99 m
GDP	EUR 418 bn
Public administration (NACE O)	166 k
Electricity price	121.6 EUR/MWh
Renewables	79.7%
Live hyperscaler regions	1

2 What is structurally different

- No structural flags differ from the Dutch reference case; the Dutch design rules transfer directly.

3 Capacity

Servers	1,861 (CPU 1,258 / GPU 100 / storage 503)
IT critical load	3.1 MW
Facility design load	4.7 MW
Sites	3 (by capacity 1, floor 3)
Average per site	1.6 MW
Site count set by	the minimum-sites floor, not capacity
CAPEX	EUR 114 m
OPEX	EUR 9 m / yr

4 Proposed geography

Region	Role	Share	MW	Notes
Copenhagen / Zealand	Primary civil cloud	41%	1.9	Statens It estate, DIX/Netnod; Zealand grid queue and storm-surge zoning.
Jutland / Fredericia - Aarhus	Sovereign secondary	27%	1.3	Wind surplus, existing hyperscale campuses, Atlantic cable landings.
Funen / Odense	Government / continuity	23%	1.1	Central, separated from both metros.
North Jutland	Strategic reserve	10%	0.5	Cheapest power, reserve/expansion.

First-pass geographic hypotheses encoding only the obvious constraints, to be replaced by scored site selection.

5 Legal and regulatory posture

Governing instrument	Danish Agency for Digital Government cloud strategy; ISO 27001 mandatory across state bodies
Cloud certification	No national cloud scheme; ISO 27001 is the binding baseline
Data classification	Sikkerhedscirkulaeret: Til tjenestebrug / Fortroligt / Hemmeligt / Yderst hemmeligt
Procurement route	SKI and Statens Indkoeb central framework agreements

Foreign jurisdiction exposure. Heavy Microsoft dependency (Azure and M365) across state and municipalities; Datatilsynet has challenged municipal use

Under the US CLOUD Act and FISA 702 a provider subject to US jurisdiction can face a lawful order for data it holds regardless of where that data sits. Residency is necessary but not sufficient; what matters is who holds the keys and who can be compelled.

6 Current state and provider landscape

Government cloud	No sovereign cloud product; Statens It central hosting; Joint Government Digital Strategy 2026-29 + DKK 80m digital-sovereignty action plan; Ministry of Digitalisation Microsoft phase-out (2025)
Maturity	pilot
Digital identity	MitID
Interconnection	DIX Lyngby and Netnod Copenhagen; Blaabjerg/Esbjerg Atlantic landings (Havfrue/AEC-2)

7 Migration path and cost

Phase	Scope	MW	CAPEX	Cumulative	Hybrid
1	Sovereign core	1.0	EUR 19 m	16%	no
2	Security and defense	1.3	EUR 33 m	45%	no
3	State record	0.9	EUR 22 m	64%	no
4	Elective	1.6	EUR 41 m	100%	yes

Phase 1 is the number that matters: **EUR 19 m** for 1.0 MW, 16% of total CAPEX. That is the floor below which no hybrid arrangement helps — and it is a small fraction of the full build.

8 Geography and threat notes

Negligible seismic; low-lying storm-surge risk; land available in Jutland; wind surplus and strong interconnectors (Viking Link) but Zealand connection queues; energy net exporter; Baltic Sea cable/pipeline sabotage exposure; NATO

9 Critical national data in scope

What the platform would *hold*, tiered by consequence of loss rather than by department. Tier 0 is the identity spine; tier 1 is the enforceable relationship between citizen and state. **0 of 15 record classes recorded.**

Tier	Record class	Register	Official description
0	Civil registry core	<i>not yet recorded</i>	
0	Facial biometric	<i>not yet recorded</i>	
0	Fingerprint biometric	<i>not yet recorded</i>	
0	Breeder document scans	<i>not yet recorded</i>	
0	Document issuance history	<i>not yet recorded</i>	
0	Digital identity credentials	<i>not yet recorded</i>	
0	Authentication audit log	<i>not yet recorded</i>	
0	Electoral roll entry	<i>not yet recorded</i>	
1	Tax	<i>not yet recorded</i>	
1	Benefits & pensions	<i>not yet recorded</i>	
1	Land & property registry	<i>not yet recorded</i>	
1	Judicial & criminal justice	<i>not yet recorded</i>	
1	Education	<i>not yet recorded</i>	
1	Business registry	<i>not yet recorded</i>	
1	Vehicle & licensing	<i>not yet recorded</i>	

A blank row means this repository has not yet researched that register. It is not a statement that the country holds no such data. Tiers 2 (health records, imaging) and 3 (genomics, archives, video retention, geospatial) are out of scope: they hold most of the bytes, but Tiers 0 and 1 hold the sovereignty.
