1 Starting point

Population	10.37 m
GDP	EUR 248 bn
Public administration (NACE O)	347 k
Electricity price	173.8 EUR/MWh
Renewables	51.2%
Live hyperscaler regions	0

2 What is structurally different

- High seismic risk. Base isolation or seismic-rated structures are mandatory, not optional, at the primary site; the second and third regions should be chosen in a different seismic domain so a single event cannot take out two regions. Expect facility CAPEX above the EUR 10 m/MW planning figure.
- No hyperscaler region in-country. Unlike the Netherlands, there is no commercial hyperscale tier to fall back on for non-critical workloads without leaving the jurisdiction. The sovereign core therefore has to be sized for a larger share of total government demand, and the hybrid model (Dutch GOAL.md section 7) needs a cross-border commercial tier.

3 Capacity

Servers	2,536 (CPU 1,792 / GPU 96 / storage 648)
IT critical load	4.0 MW
Facility design load	6.0 MW

Sites	3 (by capacity 1, floor 3)
Average per site	2.0 MW
Site count set by	the minimum-sites floor, not capacity
CAPEX	EUR 139 m
OPEX	EUR 14 m / yr

4 Proposed geography

Region	Role	Share	MW	Notes
Attica / Athens	Primary civil cloud	41%	2.4	GSIS G-Cloud, GR-IX, Microsoft Spata campus; seismic design mandatory.
Thessaloniki / Central Macedonia	Sovereign secondary	27%	1.6	Second metro, 300 km separation, Balkan transit.
Western Greece / Patras	Government / continuity	23%	1.4	Adriatic cable routes; separate seismic domain.
Crete / Chania	Strategic reserve	10%	0.6	East-Med cable hub and Great Sea Interconnector; island - reserve/edge only.

First-pass geographic hypotheses encoding only the obvious constraints, to be replaced by scored site selection.

5 Legal and regulatory posture

Governing instrument	Law 4727/2020 Digital Governance Code; government cloud (G-Cloud) operated by GRNET mandatory for public bodies
Cloud certification	No national scheme; ISO 27001
Data classification	National classified-information rules aligned to EU/NATO markings
Procurement route	Ministry of Digital Governance and GRNET

Foreign jurisdiction exposure. Microsoft announced a Greek region; public bodies otherwise consume EU regions

Under the US CLOUD Act and FISA 702 a provider subject to US jurisdiction can face a lawful order for data it holds regardless of where that data sits. Residency is necessary but not sufficient; what matters is who holds the keys and who can be compelled.

6 Current state and provider landscape

Government cloud	G-Cloud (Single Government Cloud) - GSIS / Ministry of Digital Governance Tier-3 DC on SYZEFXIS; GRNET research cloud/HPC and EUDI wallet lead; hybrid policy for non-critical data
Maturity	operational
Digital identity	gov.gr Wallet (TaxisNet-based)
Interconnection	GR-IX Athens; Crete (Chania) and Attica East-Med landings

7 Migration path and cost

Phase	Scope	MW	CAPEX	Cumulative	Hybrid
1	Sovereign core	1.8	EUR 34 m	24%	no
2	Security and defense	2.3	EUR 56 m	64%	no
3	State record	1.0	EUR 25 m	82%	no
4	Elective	0.9	EUR 25 m	100%	no

Phase 1 is the number that matters: **EUR 34 m** for 1.8 MW, 24% of total CAPEX. That is the floor below which no hybrid arrangement helps — and it is a small fraction of the full build.

8 Geography and threat notes

HIGH seismic (Aegean arc; Athens 1999; Crete 2021) - seismic design mandatory; wildfire/extreme heat; flash floods (Thessaly 2023); mountainous with sites in Attica/Thessaloniki; Attica grid needs upgrade; LNG gas import; NATO; Turkey tensions

9 Critical national data in scope

What the platform would *hold*, tiered by consequence of loss rather than by department. Tier 0 is the identity spine; tier 1 is the enforceable relationship between citizen and state. **0 of 15 record classes recorded.**

Tier	Record class	Register	Official description
0	Civil registry core	<i>not yet recorded</i>	
0	Facial biometric	<i>not yet recorded</i>	
0	Fingerprint biometric	<i>not yet recorded</i>	
0	Breeder document scans	<i>not yet recorded</i>	
0	Document issuance history	<i>not yet recorded</i>	
0	Digital identity credentials	<i>not yet recorded</i>	
0	Authentication audit log	<i>not yet recorded</i>	
0	Electoral roll entry	<i>not yet recorded</i>	
1	Tax	<i>not yet recorded</i>	
1	Benefits & pensions	<i>not yet recorded</i>	
1	Land & property registry	<i>not yet recorded</i>	
1	Judicial & criminal justice	<i>not yet recorded</i>	
1	Education	<i>not yet recorded</i>	
1	Business registry	<i>not yet recorded</i>	

Tier	Record class	Register	Official description
1	Vehicle & licensing	<i>not yet recorded</i>	

A blank row means this repository has not yet researched that register. It is not a statement that the country holds no such data. Tiers 2 (health records, imaging) and 3 (genomics, archives, video retention, geospatial) are out of scope: they hold most of the bytes, but Tiers 0 and 1 hold the sovereignty.
