- 9 [Critical national data in scope](#)

1 Starting point

Population	9.54 m
GDP	EUR 219 bn
Public administration (NACE O)	398 k
Electricity price	213.2 EUR/MWh
Renewables	24.1%
Live hyperscaler regions	0

2 What is structurally different

- Expensive power (213 EUR/MWh vs. EU average ~184). Power is the dominant OPEX line; free cooling, heat reuse, and siting near renewables or nuclear baseload move the economics more than server choice does. The model's power OPEX line is the number to attack first.
- No hyperscaler region in-country. Unlike the Netherlands, there is no commercial hyperscale tier to fall back on for non-critical workloads without leaving the jurisdiction. The sovereign core therefore has to be sized for a larger share of total government demand, and the hybrid model (Dutch GOAL.md section 7) needs a cross-border commercial tier.

3 Capacity

Servers	2,415 (CPU 1,715 / GPU 90 / storage 610)
IT critical load	3.8 MW
Facility design load	5.7 MW

Sites	3 (by capacity 1, floor 3)
Average per site	1.9 MW
Site count set by	the minimum-sites floor, not capacity
CAPEX	EUR 132 m
OPEX	EUR 15 m / yr

4 Proposed geography

Region	Role	Share	MW	Notes
Budapest	Primary civil cloud	41%	2.3	NISZ KAK estate, BIX; Danube flood zoning applies.
Debrecen / East	Sovereign secondary	27%	1.5	Industrial grid growth; 130 km from the Ukrainian border - hardened design.
Szeged - Pecs / South	Government / continuity	23%	1.3	Solar belt, southern separation.
Gyor / West	Strategic reserve	10%	0.6	Closest to Vienna/Bratislava transit; reserve.

First-pass geographic hypotheses encoding only the obvious constraints, to be replaced by scored site selection.

5 Legal and regulatory posture

Governing instrument	Act on Electronic Administration; NISZ operates the government data centres
Cloud certification	No national scheme; ISO 27001
Data classification	Act CLV/2009 on Classified Information: Restricted / Confidential / Secret / Top Secret
Procurement route	Digitalis Kormanyzati Ugynokseg (DKU) as mandatory central IT purchasing channel

Foreign jurisdiction exposure. No in-country region; Microsoft used in parts of administration via EU regions

Under the US CLOUD Act and FISA 702 a provider subject to US jurisdiction can face a lawful order for data it holds regardless of where that data sits. Residency is necessary but not sufficient; what matters is who holds the keys and who can be compelled.

6 Current state and provider landscape

Government cloud	Kormanyzati Felho (Government Cloud) + Kormanyzati Adatkozpont (KAK) operated by NISZ Zrt. under the Digital Hungary Agency; ministry IT consolidation by decree
Maturity	operational
Digital identity	DAP - Digitalis Allampolgarsag app + eSzemelyi eID
Interconnection	BIX Budapest; landlocked

7 Migration path and cost

Phase	Scope	MW	CAPEX	Cumulative	Hybrid
1	Sovereign core	1.8	EUR 34 m	26%	no
2	Security and defense	2.2	EUR 53 m	66%	no
3	State record	0.9	EUR 23 m	83%	no

Phase	Scope	MW	CAPEX	Cumulative Hybrid
4	Elective	0.8	EUR 22 m	100% no

Phase 1 is the number that matters: **EUR 34 m** for 1.8 MW, 26% of total CAPEX. That is the floor below which no hybrid arrangement helps — and it is a small fraction of the full build.

8 Geography and threat notes

Low-moderate seismic; Danube/Tisza floods (2024); flat land abundant, water stress rising; Paks nuclear + Paks II (Rosatom) - Russian nuclear fuel and TurkStream gas dependence; ~25% power imports; 4th-highest EU industrial power price; ~130 km from Ukraine

9 Critical national data in scope

What the platform would *hold*, tiered by consequence of loss rather than by department. Tier 0 is the identity spine; tier 1 is the enforceable relationship between citizen and state. **0 of 15 record classes recorded.**

Tier	Record class	Register	Official description
0	Civil registry core	<i>not yet recorded</i>	
0	Facial biometric	<i>not yet recorded</i>	
0	Fingerprint biometric	<i>not yet recorded</i>	
0	Breeder document scans	<i>not yet recorded</i>	
0	Document issuance history	<i>not yet recorded</i>	
0	Digital identity credentials	<i>not yet recorded</i>	
0	Authentication audit log	<i>not yet recorded</i>	
0	Electoral roll entry	<i>not yet recorded</i>	
1	Tax	<i>not yet recorded</i>	
1	Benefits & pensions	<i>not yet recorded</i>	
1	Land & property registry	<i>not yet recorded</i>	
1	Judicial & criminal justice	<i>not yet recorded</i>	
1	Education	<i>not yet recorded</i>	
1	Business registry	<i>not yet recorded</i>	
1	Vehicle & licensing	<i>not yet recorded</i>	

A blank row means this repository has not yet researched that register. It is not a statement that the country holds no such data. Tiers 2 (health records, imaging) and 3 (genomics, archives, video retention, geospatial) are out of scope: they hold most of the bytes, but Tiers 0 and 1 hold the sovereignty.
