1 Starting point

Population	1.86 m
GDP	EUR 43 bn
Public administration (NACE O)	63 k
Electricity price	136.1 EUR/MWh
Renewables	55.5%
Live hyperscaler regions	0

2 What is structurally different

- Frontline exposure. A land border with Russia or Belarus (or a Black Sea coast facing the war) changes the threat model from *geopolitical supply disruption* to *kinetic and sabotage risk against the facilities themselves*. Defense and security workloads are scaled up 1.5x/1.25x in the baseline, and at least one site should be hardened (EMP/blast, autonomous power for weeks, not hours). A purely national footprint cannot provide the out-of-country cold copy that Estonia's Data Embassy already demonstrates; this is the first item to revisit when the EU federation layer (Dutch GOAL.md section 16) is modelled.
- No hyperscaler region in-country. Unlike the Netherlands, there is no commercial hyperscale tier to fall back on for non-critical workloads without leaving the jurisdiction. The sovereign core therefore has to be sized for a larger share of total government demand, and the hybrid model (Dutch GOAL.md section 7) needs a cross-border commercial tier.

3 Capacity

Servers	608 (CPU 417 / GPU 30 / storage 161)
---------	--------------------------------------

IT critical load	1.0 MW
Facility design load	1.5 MW
Sites	3 (by capacity 1, floor 3)
Average per site	0.5 MW
Site count set by	the minimum-sites floor, not capacity
CAPEX	EUR 36 m
OPEX	EUR 3 m / yr

4 Proposed geography

Region	Role	Share	MW	Notes
Riga	Primary civil cloud	41%	0.6	LVRTC LVDC estate, LIX; Daugava flood zoning.
Ventspils / Kurzeme	Sovereign secondary	27%	0.4	Latvia-Sweden cable landing; furthest from the eastern frontier.
Valmiera / Vidzeme	Government / continuity	23%	0.3	Inland separation; Estonia transit.
Out-of-country reserve	Strategic reserve	10%	0.1	Follow the Estonian Data Embassy pattern - national-only model cannot close this gap.

First-pass geographic hypotheses encoding only the obvious constraints, to be replaced by scored site selection.

5 Legal and regulatory posture

Governing instrument	State Information Systems Law; VRAA operates the state cloud platform
Cloud certification	No national scheme; ISO 27001
Data classification	Law on Official Secrets: Restricted / Confidential / Secret / Top Secret
Procurement route	Electronic Procurement System (EIS) central catalogue

Foreign jurisdiction exposure. No in-country region; limited Microsoft use via EU regions

Under the US CLOUD Act and FISA 702 a provider subject to US jurisdiction can face a lawful order for data it holds regardless of where that data sits. Residency is necessary but not sufficient; what matters is who holds the keys and who can be compelled.

6 Current state and provider landscape

Government cloud	Latvian National Federated Cloud / LVDC - LVRTC + Interior Ministry IC + MoA DC + National Library; RRF-funded phase completed May 2026 (64 state systems hosted)
Maturity	operational
Digital identity	eID card / eParaksts / Smart-ID
Interconnection	LIX Riga; LVRTC Latvia-Sweden Baltic cable

7 Migration path and cost

Phase	Scope	MW	CAPEX	Cumulative	Hybrid
1	Sovereign core	0.3	EUR 6 m	17%	no
2	Security and defense	0.7	EUR 17 m	65%	no
3	State record	0.2	EUR 6 m	81%	no
4	Elective	0.3	EUR 7 m	100%	no

Phase 1 is the number that matters: **EUR 6 m** for 0.3 MW, 17% of total CAPEX. That is the floor below which no hybrid arrangement helps — and it is a small fraction of the full build.

8 Geography and threat notes

Borders Russia and Belarus; NATO frontline; Baltic subsea sabotage and GNSS jamming; no seismic; some Daugava/coastal flooding; desynchronised from BRELL 2025; import-dependent in dry years

9 Critical national data in scope

What the platform would *hold*, tiered by consequence of loss rather than by department. Tier 0 is the identity spine; tier 1 is the enforceable relationship between citizen and state. **0 of 15 record classes recorded.**

Tier	Record class	Register	Official description
0	Civil registry core	<i>not yet recorded</i>	
0	Facial biometric	<i>not yet recorded</i>	
0	Fingerprint biometric	<i>not yet recorded</i>	
0	Breeder document scans	<i>not yet recorded</i>	
0	Document issuance history	<i>not yet recorded</i>	
0	Digital identity credentials	<i>not yet recorded</i>	
0	Authentication audit log	<i>not yet recorded</i>	
0	Electoral roll entry	<i>not yet recorded</i>	
1	Tax	<i>not yet recorded</i>	
1	Benefits & pensions	<i>not yet recorded</i>	
1	Land & property registry	<i>not yet recorded</i>	
1	Judicial & criminal justice	<i>not yet recorded</i>	
1	Education	<i>not yet recorded</i>	
1	Business registry	<i>not yet recorded</i>	

Tier	Record class	Register	Official description
1	Vehicle & licensing	<i>not yet recorded</i>	

A blank row means this repository has not yet researched that register. It is not a statement that the country holds no such data. Tiers 2 (health records, imaging) and 3 (genomics, archives, video retention, geospatial) are out of scope: they hold most of the bytes, but Tiers 0 and 1 hold the sovereignty.
