1 Starting point

Population	36.50 m
GDP	EUR 923 bn
Public administration (NACE O)	1,215 k
Electricity price	193.5 EUR/MWh
Renewables	30.4%
Live hyperscaler regions	2

2 What is structurally different

- Frontline exposure. A land border with Russia or Belarus (or a Black Sea coast facing the war) changes the threat model from *geopolitical supply disruption* to *kinetic and sabotage risk against the facilities themselves*. Defense and security workloads are scaled up 1.5x/1.25x in the baseline, and at least one site should be hardened (EMP/blast, autonomous power for weeks, not hours). A purely national footprint cannot provide the out-of-country cold copy that Estonia's Data Embassy already demonstrates; this is the first item to revisit when the EU federation layer (Dutch GOAL.md section 16) is modelled.
- Expensive power (194 EUR/MWh vs. EU average ~184). Power is the dominant OPEX line; free cooling, heat reuse, and siting near renewables or nuclear baseload move the economics more than server choice does. The model's power OPEX line is the number to attack first.

3 Capacity

Servers	10,227 (CPU 7,199 / GPU 431 / storage 2,597)
---------	--

IT critical load	16.4 MW
Facility design load	24.7 MW
Sites	4 (by capacity 3, floor 4)
Average per site	6.2 MW
Site count set by	the minimum-sites floor, not capacity
CAPEX	EUR 578 m
OPEX	EUR 61 m / yr

4 Proposed geography

Region	Role	Share	MW	Notes
Warsaw / Mazovia	Primary civil cloud	36%	8.9	COI/NASK RChO estate, PLIX, both hyperscaler regions.
Poznan / Greater Poland	Sovereign secondary	18%	4.4	Western separation, Beyond.pl campus, German transit.
Krakov / Lesser Poland	Defense / industrial	18%	4.4	Southern separation, CloudFerro/AI factory ecosystem.
Gdansk / Pomerania	Government / continuity	18%	4.4	Baltic cable access, planned nuclear grid; Kaliningrad proximity - hardened.
Lodz - Wroclaw	Strategic reserve	10%	2.5	Central/SW reserve; 2024 Oder flood plains excluded.

First-pass geographic hypotheses encoding only the obvious constraints, to be replaced by scored site selection.

5 Legal and regulatory posture

Governing instrument	Act on Computerisation of Public Entities; Wspolna Infrastruktura Informatyczna Panstwa (WIIP) programme
Cloud certification	No national scheme; KRI regulation plus ISO 27001
Data classification	Act on the Protection of Classified Information (2010): Zastrzezone / Poufne / Tajne / Scisle tajne
Procurement route	Centralny Osrodek Informatyki (COI) and central framework agreements

Foreign jurisdiction exposure. Azure (Poland Central) and Google (Warsaw) regions live; ZUCH catalogue mediates government consumption

Under the US CLOUD Act and FISA 702 a provider subject to US jurisdiction can face a lawful order for data it holds regardless of where that data sits. Residency is necessary but not sufficient; what matters is who holds the keys and who can be compelled.

6 Current state and provider landscape

Government cloud	WIIP: Rzadowa Chmura Obliczeniowa (RChO, COI/NASK, Ministry of Digital Affairs) + ZUCH public-cloud marketplace; Chmura Krajowa/OChK (PKO BP + PFR) commercial; national sovereign cloud/AI factory debate under EU CADA
Maturity	operational
Digital identity	Profil Zaufany / mObywatel / e-dowod
Interconnection	PLIX and Equinix IX Warsaw; no major subsea landing

7 Migration path and cost

Phase	Scope	MW	CAPEX	Cumulative	Hybrid
1	Sovereign core	6.2	EUR 119 m	21%	no
2	Security and defense	11.5	EUR 281 m	69%	no
3	State record	3.5	EUR 89 m	85%	no
4	Elective	3.4	EUR 90 m	100%	yes

Phase 1 is the number that matters: **EUR 119 m** for 6.2 MW, 21% of total CAPEX. That is the floor below which no hybrid arrangement helps — and it is a small fraction of the full build.

8 Geography and threat notes

Frontline: borders Kaliningrad, Belarus and Ukraine; recurring sabotage/arson and drone incursions (2025); GNSS jamming; no seismic; Oder/Vistula floods (2024); coal-heavy expensive grid with connection constraints; nuclear planned mid-2030s

9 Critical national data in scope

What the platform would *hold*, tiered by consequence of loss rather than by department. Tier 0 is the identity spine; tier 1 is the enforceable relationship between citizen and state. **0 of 15 record classes recorded.**

Tier	Record class	Register	Official description
0	Civil registry core	<i>not yet recorded</i>	
0	Facial biometric	<i>not yet recorded</i>	
0	Fingerprint biometric	<i>not yet recorded</i>	
0	Breeder document scans	<i>not yet recorded</i>	
0	Document issuance history	<i>not yet recorded</i>	
0	Digital identity credentials	<i>not yet recorded</i>	
0	Authentication audit log	<i>not yet recorded</i>	
0	Electoral roll entry	<i>not yet recorded</i>	
1	Tax	<i>not yet recorded</i>	
1	Benefits & pensions	<i>not yet recorded</i>	
1	Land & property registry	<i>not yet recorded</i>	
1	Judicial & criminal justice	<i>not yet recorded</i>	
1	Education	<i>not yet recorded</i>	

Tier	Record class	Register	Official description
1	Business registry	<i>not yet recorded</i>	
1	Vehicle & licensing	<i>not yet recorded</i>	

A blank row means this repository has not yet researched that register. It is not a statement that the country holds no such data. Tiers 2 (health records, imaging) and 3 (genomics, archives, video retention, geospatial) are out of scope: they hold most of the bytes, but Tiers 0 and 1 hold the sovereignty.
