1 Starting point

Population	5.42 m
GDP	EUR 137 bn
Public administration (NACE O)	210 k
Electricity price	209.0 EUR/MWh
Renewables	24.9%
Live hyperscaler regions	0

2 What is structurally different

- Moderate seismic risk. Seismic zoning should be a site-scoring criterion; at least two regions in different domains.
- Expensive power (209 EUR/MWh vs. EU average ~184). Power is the dominant OPEX line; free cooling, heat reuse, and siting near renewables or nuclear baseload move the economics more than server choice does. The model's power OPEX line is the number to attack first.
- No hyperscaler region in-country. Unlike the Netherlands, there is no commercial hyperscale tier to fall back on for non-critical workloads without leaving the jurisdiction. The sovereign core therefore has to be sized for a larger share of total government demand, and the hybrid model (Dutch GOAL.md section 7) needs a cross-border commercial tier.

3 Capacity

Servers	1,375 (CPU 972 / GPU 53 / storage 350)
---------	--

IT critical load	2.2 MW
Facility design load	3.3 MW
Sites	3 (by capacity 1, floor 3)
Average per site	1.1 MW
Site count set by	the minimum-sites floor, not capacity
CAPEX	EUR 76 m
OPEX	EUR 8 m / yr

4 Proposed geography

Region	Role	Share	MW	Notes
Bratislava	Primary civil cloud	41%	1.3	MoI Kopcianska and MoF DataCentrum, SIX; Danube flood zoning.
Banska Bystrica / Centre	Sovereign secondary	27%	0.9	MoF Tajov backup site; 200 km separation, cheap land.
Kosice / East	Government / continuity	23%	0.7	Eastern metro; 80 km from Ukraine - hardened design.
Zilina / North	Strategic reserve	10%	0.3	Hydro grid, Czech/Polish transit; reserve.

First-pass geographic hypotheses encoding only the obvious constraints, to be replaced by scored site selection.

5 Legal and regulatory posture

Governing instrument	Act 95/2019 on IT in Public Administration; government cloud (vladny cloud) catalogue
Cloud certification	No national scheme; ISO 27001
Data classification	Act 215/2004 on Classified Information: Vyhradene / Doverne / Tajne / Prisne tajne
Procurement route	MIRRI (Ministry of Investments, Regional Development and Informatisation) central catalogue

Foreign jurisdiction exposure. No in-country region; Microsoft 365 in parts of administration

Under the US CLOUD Act and FISA 702 a provider subject to US jurisdiction can face a lawful order for data it holds regardless of where that data sits. Residency is necessary but not sufficient; what matters is who holds the keys and who can be compelled.

6 Current state and provider landscape

Government cloud	Vladny cloud (Government Cloud) - Ministry of Interior Datacentrum Kopcianska + MoF DataCentrum (backup Tajov); MIRRI governance; hybrid extension to certified providers
Maturity	operational
Digital identity	eID (obciansky preukaz s cipom) / Slovensko v mobile
Interconnection	SIX Bratislava and NIX.SK; landlocked

7 Migration path and cost

Phase	Scope	MW	CAPEX	Cumulative	Hybrid
1	Sovereign core	1.0	EUR 19 m	25%	no
2	Security and defense	1.3	EUR 30 m	65%	no
3	State record	0.5	EUR 13 m	82%	no
4	Elective	0.5	EUR 13 m	100%	no

Phase 1 is the number that matters: **EUR 19 m** for 1.0 MW, 25% of total CAPEX. That is the floor below which no hybrid arrangement helps — and it is a small fraction of the full build.

8 Geography and threat notes

Low-moderate seismic (Zilina/Komarno zones); Danube/Vah floods (2024); short Ukraine border; gas-transit dependency (Russian transit ended Jan 2025); nuclear ~60% reliable baseload but high industrial price; cheap land in centre/east

9 Critical national data in scope

What the platform would *hold*, tiered by consequence of loss rather than by department. Tier 0 is the identity spine; tier 1 is the enforceable relationship between citizen and state. **0 of 15 record classes recorded.**

Tier	Record class	Register	Official description
0	Civil registry core	<i>not yet recorded</i>	
0	Facial biometric	<i>not yet recorded</i>	
0	Fingerprint biometric	<i>not yet recorded</i>	
0	Breeder document scans	<i>not yet recorded</i>	
0	Document issuance history	<i>not yet recorded</i>	
0	Digital identity credentials	<i>not yet recorded</i>	
0	Authentication audit log	<i>not yet recorded</i>	
0	Electoral roll entry	<i>not yet recorded</i>	
1	Tax	<i>not yet recorded</i>	
1	Benefits & pensions	<i>not yet recorded</i>	
1	Land & property registry	<i>not yet recorded</i>	
1	Judicial & criminal justice	<i>not yet recorded</i>	
1	Education	<i>not yet recorded</i>	
1	Business registry	<i>not yet recorded</i>	

Tier	Record class	Register	Official description
1	Vehicle & licensing	<i>not yet recorded</i>	

A blank row means this repository has not yet researched that register. It is not a statement that the country holds no such data. Tiers 2 (health records, imaging) and 3 (genomics, archives, video retention, geospatial) are out of scope: they hold most of the bytes, but Tiers 0 and 1 hold the sovereignty.
